

TECHWOOL

CLEANING & MAINTENANCE INSTRUCTIONS

For dust or dirt accumulation that may occur when installing Techool panels, a vacuum cleaner with a soft brush attachment may be used. The soft brush attachment should be at least 1" for best results. If additional cleaning is needed, the surface can be spot cleaned with a damp cloth.

If chipping or deep abrasion occur on painted panels, Technature recommended touch up paint should be used to restore the colour. Please follow the instructions specific to the paint when applying.

Techwool panels do not require additional maintenance once properly installed except for occasional cleaning. The high-quality wood wool fibers bound by cement make the panels class A fire rated, mold- and fungi-resistant, and will not sag or deform with changes in humidity.
